

Feed, food and beverage

Improve your industrial performance
without the stress

Mechanical

Electrical

Automation

In the feed, food and beverage sector, adopting innovative technologies to optimise your operation while addressing regulatory, sustainability, and supply chain challenges is essential for driving growth and building resilience.

Whether it's upgrades to legacy equipment, new installations or entirely new facilities you're after, we can support you with our expertise. Our highly skilled engineers from our mechanical, electrical and automation teams work closely together to deliver anything from an individual service or product, all the way up to a wholly managed full end-to-end solution.

We take away the pain and get the job done safely, on time, within budget and with minimal disruption. You'll get a multi-specialist team with a single point of contact to take care of everything for your whole project lifecycle. From initial consultancy, design, manufacture and assembly, through to testing, installation, commissioning and maintenance, our solutions are designed to bring you complete peace of mind.

We deliver bespoke projects to a diverse base of customers, often in highly complex and demanding environments, and we pride ourselves on forming close, sustainable working relationships with our customers.

Safe, reliable and durable mechanical solutions

Our dedicated mechanical workshops and expert site teams ensure a seamless transition to a safe, reliable and energy-efficient solution to optimise your industrial processes.

We design, fabricate and install the mechanical scope so whatever your requirements, you can be sure we can provide a range of specialist products and services for your needs.

Our manufacturing facility ensures our quality control is maintained and allows for full factory acceptance and, after delivery, we hold safety and hygiene standards at the forefront of our site management.

Our high standards and specialist expertise means you can be confident in the compliance, safety and structural integrity of fabrications designed, manufactured and installed by Actemium.

Electrical engineering to support energy resilience

Technological, environmental and operational changes bring their own set of challenges when it comes to energy, but we're here to help you address those challenges while making the most of the opportunities they bring.

We support all aspects of your sustainability mission, whether that's improving energy efficiency, improving manufacturing processes, circular economy or environmental targets.

Our scope of delivery includes everything from data to low and medium voltage, grid connection, power distribution and cable infrastructure. We can also design and manufacture electrical control panels covering low voltage distribution, network data panels, motor control centres and automation control panels.

Our directly employed Electrical Contracting workforce of skilled operatives across multiple UK locations deliver projects on our customer sites every day. We're ready to work with you from idea to realisation: from consultancy, detailed design, manufacture and assembly, through to testing/certification, installation, commissioning, and ongoing maintenance.

"We were so impressed with the results that we at Actemium invested in training our engineers to fully deliver Emulate 3D models for any client, from concept to final commissioning and beyond. The model developed for this client has proven to be an excellent training tool."

Emulate3D

Advanced automation for efficient and traceable production lines

Our highly specialist engineers are experts at automating modern manufacturing processes. We are aligned with the industry's needs to find solutions to help you reduce waste, enhance food safety, maintain quality, and provide high levels of production efficiency.

We can deliver on all aspects of the design according to your needs, and realisation of the process control system, covering PLC, SCADA, DCS and MIS software.

We provide systems integration for your industrial control systems, control processes and information from end to end. We also bring you the latest industry best practice and experience in cyber security, digital twins, and functional safety.

- Process automation design
- Industrial software development
- Safety system design
- Control panel design and build
- Installation and commissioning
- 24/7 support

"Actemium delivered a seamless turnkey solution for our evaporator installation, expertly managing electrical, mechanical, and automation works with minimal disruption. Their understanding of our sector's high standards made them a reliable partner for quality and efficiency."

Grant Remington – Project Manager
Kendal Nutricare

You're in safe hands

We can maintain all aspects of your project according to your needs, and you can be assured that health, safety and hygiene is our number one priority for our people, your people and your customers.

Our sustainability aims are aligned with yours, helping you reduce emissions, improve energy efficiency and create a circular economy to protect our environment.

With Actemium, you get one team with multiple expertise, delivering innovative, safe and sustainable solutions and services across the entire industrial lifecycle.

Actemium UK

Actemium has multiple centres of excellence spread across the UK each empowered to operate with autonomy. With an embedded culture of transparency and encouragement to think like our customers, we deliver safe, reliable and sustainable projects through our incredible people.

Spin the Actemium Wheel to see the diversity we can offer in competence and market sectors. We exist to help our customers improve their performance & competitive advantage.

Why our repeat business is so high

- We are a people business
- We are honest & do the right thing
- We put the customer 1st
- We innovate
- We share success
- We do what we say we will
- You can trust us
