Fluor Corporation for Exxon Neftegas Limited (ENL)

Sakhalin Odoptu Stage 2 Project

Sakhalin-2 is one of the world's largest integrated, export-oriented oil and gas projects and Russia's first offshore gas project.

The project infrastructure includes three offshore platforms, an onshore processing facility, 300 kilometres of offshore pipelines and 1,600 kilometres of onshore pipelines, an oil export terminal and a liquefied natural gas (LNG) plant.

Fluor executed the engineering, procurement, and construction management for Exxon Neftegas Limited for the development of Sakhalin-2.

End Client:	Exxon Neftegas Limited
Country:	Chayvo, Russia
Year of completion:	December 2015

Solution Implemented

Power Distribution & Lighting Contactor Panels

- To date Actemium ICS has supplied 60 panel boards of various designs for Power Distribution and Lighting control.
- Main Features of the panelboards include:
 - Compact and modular design
 - IP65 degree of protection – Outdoor and Indoor locations
 - Temperature rating range of -40 °C and +40 °C
 - Short circuit rating of 50kA
 - Galvanised steel plates for top, bottom and side cable entry
 - Top level functionality and testing
- Total Value of the Project: £300K
